

# DELIMAR

Flame-retardant outdoor and indoor fabrics

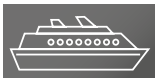

**DELIMAR fabrics are fascinating due to their unique weaving structure and summery colours. They combine the most important outdoor characteristics. In addition, they are flame-retardant for use in public buildings such as hotel lobbies or restaurants..**

### **The high design claim both for inside and outside**

DELIMAR upholstery fabrics are characterised by Parisian chic which impresses both indoor as well as outside. There is a harmonious transition from the interior to the exterior. Lively designs are complemented by structured plains and melange fabrics, all in exciting colours.

DELIMAR outdoor fabrics were developed for hotels, restaurants, lounges and pools. IMO certificates confirm the suitable use on cruise ships.

### **Function first**

The fabrics are not only flame-retardant but they also contain important properties for outdoor use such as chloride- and seawater fastness, an excellent light and weather resistance. The designs can be machine washed at 40°C and they dry quickly so that bacteria and mould cannot develop.

DELIMAR fabrics are free of harmful substances and do not cause allergies, they are anti-static and waterrepellent.

All articles of this collection are made out of the innovative fibre Polyolefinic FR; the positive properties of this fibre are permanently inherent.
